LINUX / KUBERNETES / PLATFORM ENGINEERING

André Hansen.

Senior System Engineer

1988.hansen@gmail.com · GitHub: andr0id88 · LinkedIn

I operate Linux infrastructure and Kubernetes platforms supporting national healthcare services in Norway. My work combines hands-on operations, troubleshooting, incident response, and automation.

I also build practical tools that make platforms easier to understand and operate. Much of my recent development work is in **Go**. I also work with Bash and am familiar with Python.

---

01 / **Selected achievements**

Highlights from previous work. Figures describe the environments and projects at the time.

TANZU TO VITISTACK

Kubernetes platform migration

Contributed to building Vitistack and the transition from Tanzu for platforms supporting national healthcare services. My work spans Kubernetes, Talos, platform upgrades, and operational automation.

1,400+ Linux servers

Worked with a Linux estate of more than 1,400 servers, including third-line troubleshooting and on-call responsibilities.

~1,400 servers migrated

Contributed to the migration of approximately 1,400 servers to a new Red Hat Satellite environment.

02 / **Selected projects**

INTEGRATED PLATFORM OPERATIONS

Internal project

Viti Center

I develop Viti Center, a Go-based operations platform with a central hub and distributed agents. It connects Kubernetes/Talos, KubeVirt, Ceph, Argo CD, ROR, and Slack/vitibot. Its scope includes cluster provisioning and lifecycle workflows, upgrade readiness, access and metadata management, migration tracking, and resilience diagnostics. It makes placement and anti-affinity risks visible and brings request progress and infrastructure findings into one operational workspace.

Hivemind

I could not find a Linux AI tool that fit the way I work, so I built Hivemind from scratch around my own workflow. It brings coding-agent sessions, activity, and usage visibility into a desktop and terminal workspace, with support for review and second opinions.

03 / Work experience

April 2020–present — Tromsø, Norway

Senior System Engineer

Norsk helsenett SF

Kubernetes team April 2025–present

- **Tanzu operations:** worked with around **300 Tanzu clusters and 1,400 Tanzu nodes**.
- **Current combined platform:** around **500 clusters in total**, comprising approximately **300 Tanzu and 200 Vitistack clusters**, supporting critical healthcare infrastructure.
- Contribute to Kubernetes upgrades, platform automation, and the transition from Tanzu to Viti/Vitistack, including work with Talos.
- Develop internal operational tools, including Viti Center. Much of my recent coding work is in Go.

Linux operations & automation

- Linux operations and third-line troubleshooting, with Ansible and Hammer automation for Satellite installation, configuration, and rebuilds.
- On-call responsibilities across Linux, container, and HashiCorp Vault teams, including incident response.
- CyberArk API automation for SSH-key rotation, and incident-response tooling using Satellite and Insights APIs.

July 2018–April 2020

System Administrator

Nordland fylkeskommune

04 / Technical skills

Linux & lifecycle management	RHEL · Red Hat Satellite · Hammer · Insights
Containers & platforms	Kubernetes · Talos · Tanzu · Vitistack · Harbor
Automation & development	Go · Python · Bash · Ansible/AWX · Puppet
Security & operations	HashiCorp Vault · CyberArk · Monitoring · Incident response

05 / Certifications & education

Certifications earned

RHCE	April 2024
RHCSA	February 2024

Training completed

CKA course	2023
Puppet Advanced	2022
Puppet Essentials	2021
